Mechanical Engineer

Description

Do you have an interest in forensic science? Have you ever wanted to be part of an engineering firm that delivers expert analysis across a wide range of complex cases? CED Technologies' success is built on a team of highly qualified, experienced professional engineers who collectively bring over 180 years of combined engineering expertise. Our professionals hold advanced degrees across multiple disciplines, including mechanical, civil/structural, electrical, chemical, and biomechanical engineering, as well as materials science (metallurgy) and fire investigation.

CED Technologies Inc., located in **Shelton, CT**, is seeking a **Mechanical Engineer** to perform forensic investigations involving vehicle accident reconstruction, water loss origin and cause, workplace safety, product liability, and related analyses. This role is part of a collaborative, supportive work environment with a strong company culture.

This is a salaried position with an annual salary range of \$85,000-\$125,000, commensurate with experience. The selected candidate will be eligible to participate in the quarterly Engineering Incentive Plan and may be eligible for an annual discretionary bonus, based on both individual and company performance.

Job Description:

The Mechanical Engineer will gain comprehensive, hands-on engineering experience while performing in-depth forensic investigations, including vehicle accident analysis. This role involves applying sound engineering principles to support clients with loss resolution and litigation requirements. The ideal candidate is willing to travel occasionally on a day or overnight basis to investigate incidents in the field. This position is well suited for a motivated, self-starting individual who works well independently, prefers a dynamic work environment over a traditional desk-based role, and occasionally enjoys working outdoors.

The Mechanical Engineer will be responsible for performing mechanical inspections and evaluating motor vehicle crashes. The role involves conducting black box' downloads, recreating motor vehicle crashes using engineering analyses and simulation tools and managing forensic engineering projects from concept to completion

Required Qualifications

Required Qualifications:

- B.S. and or M.S. in Mechanical Engineering.
- At least 2 to 3 years of specialized Mechanical Engineering experience.
- Professional Engineer (P.E.) license, or Engineer in Training (EIT) certification with a commitment to obtaining a P.E. license.
- Knowledge of key automotive vehicle systems such as powertrain, chassis, thermal systems, dynamics.
- You must be willing to travel on a day or overnight basis to conduct investigations.
- Excellent verbal and written communication skills.
